DETAILED ACTION

Information Disclosure Statement

1. The listing of references in the Search Report is not considered to be an information disclosure statement (IDS) complying with 37 CFR 1.98. 37 CFR 1.98(a)(2) requires a legible copy of: (1) each foreign patent; (2) each publication or that portion which caused it to be listed; (3) for each cited pending U.S. application, the application specification including claims, and any drawing of the application, or that portion of the application which caused it to be listed including any claims directed to that portion, unless the cited pending U.S. application is stored in the Image File Wrapper (IFW) system; and (4) all other information, or that portion which caused it to be listed. In addition, each IDS must include a list of all patents, publications, applications, or other information submitted for consideration by the Office (see 37 CFR 1.98(a)(1) and (b)), and MPEP § 609.04(a), subsection I. states, "the list ... must be submitted on a separate paper." Therefore, the references cited in the Search Report have not been considered. Applicant is advised that the date of submission of any item of information or any missing element(s) will be the date of submission for purposes of determining compliance with the requirements based on the time of filing the IDS, including all "statement" requirements of 37 CFR 1.97(e). See MPEP § 609.05(a). It is possible that a form PTO-1449 may have been lost by this Office because the Examiner notes an IDS transmittal form does appear in the IFW file.

Claim Rejections - 35 USC § 101

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

3. Claims 1-14 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claims 1-14 lack a *useful, concrete and tangible result*. Applicant is advised to see the latest 35 USC 101 Interim Guidelines for Subject Matter Eligibility promulgated by the USPTO in the O.G. on 11/22/05. In addition, it is noted that claims 11-14 refer to a “computer program” or “record carrier” per se. A computer program, logic or language, record carrier or signal, per se, are not statutory under 35 USC 101 as they are not a process, machine, manufacture, or composition of matter.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

5. Claims 1, 3, 6, 12-14, and 15-17 are rejected under 35 U.S.C. 102(a) as being anticipated by Lemma et al. (“A Robustness and Audibility Analysis of a Temporal Envelope Modulating Audio Watermark”, IEEE, 2002. (Note the different inventive entity.)

6. As per independent method claim 1 and independent apparatus claim 15, the following correspondence is made: the “extractor arranged to extract an initial estimate of the sequence of symbols from the received signal” is the “(a) watermark symbol extraction stage of Fig. 5 of Lemma et al.; and the “interpolator arranged to form an estimate of a correctly time scaled sequence of the symbols by interpolating the values of said initial estimate” is the “(b) buffering and interpolation stage” combined with the “(c) correlation and decision stage.” See section 3.2 entitled “Temporally Non-synchronized Detection” which described the operation of Fig. 5, the “Mask watermark detector.”

7. As per dependent claim 3, see the linear interpolation of section 3.2.2 of Lemma et al.

8. As per dependent claims 6 and 16, see the buffer of Fig. 5 of Lemma et al.

9. As per dependent claims 12-14 and 17, this is inherent in Lemma et al. because digital signal processing may be performed by hardware or software or a combination, and the watermark detector of Lemma et al. may be described as a decoder since it decodes an embedded watermark.

Allowable Subject Matter

10. Claims 2, 4-5, and 7-11 are allowable over the prior art of record.

Conclusion

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See the attached PTO-892.
